INSTALLATION AND SETTING

BEFORE INSTALLATION, ISOLATE THE SUPPLY.
Connect the unit as required.

Installation work must be carried out by qualified personnel.

Setting the unit.

Set the "Hyst. / Mode" selector ❼ to the required position depending whether under or over monitoring is required. Select either a suitable hysteresis setting of 2% or 10% or select Latch if required. Set the ❻ *Range* for the monitored input current. Set the *Power Up Delay* according to whether start up currents are likely in the application. Set the *Trip Level %* ❺ and *Delay* ❹ to suit the selected monitoring range and delay to tripping period.

Applying power.

Apply power and the green LED ❶ will illuminate.
If Under current mode is selected: Relay energizes & red LED ❸ illuminates if the current is above the set *Trip Level*. If the current falls below the *Trip Level*, yellow LED ❷ flashes for the set *Delay* then remains lit. Red LED extinguishes & relay de-energises.
If Over current mode is selected: Relay energizes & red LED ❸ illuminates if the current is below the set *Trip Level*. If the current rises above the *Trip Level*, yellow LED ❷ flashes for the set *Delay* and remains lit. Red LED extinguishes & relay de-energises.
